

Bed & Chair Exit Alert Pads

Optional occupancy alerts for a compatible telecare system. A sensor pad and transmission unit can help raise an alert when someone leaves their bed or chair, according to the agreed setup.

What the kit does

The pad works with a compatible occupancy controller and telecare base unit. Alert behaviour is configured around the person's routine and the response available.

The current controller supports bed or chair occupancy sensing and can provide sound and light indications. The complete arrangement must be programmed and tested before use.

Equipment options

Bed pad kit: £190 including VAT. Includes the transmission unit and one bed pad.

Chair pad kit: £190 including VAT. Includes the transmission unit and one chair pad.

Replacement pad: £50 including VAT. A replacement bed or chair pad does not include the transmission unit. Contact us to match the correct part.

An enuresis pad is a separate accessory and is not included in either kit.

Before choosing a pad

Tell us the type of bed or chair, the existing alarm model and when an alert should be raised. Agree who will respond, including overnight if relevant.

This equipment does not show where someone goes after leaving the bed or chair and does not replace personal care or supervision.

Contact us before ordering. Existing customers should quote their customer number. We will check suitability, compatibility and any programming, fitting or testing required.
