

Vibe

Sensory and Communication Aid

The Vibe is our all-in-one sensory and communication aid. Compact and elegantly designed, the Vibe alerts users when a connected device has been activated. From smoke alarms to doorbells, the Vibe's flexible system allows it to be tailored to individual needs, ensuring it fits seamlessly into daily life.

When a sensor is triggered, the Vibe communicates this through a combination of clear, accessible alerts. A bright strobe light and LED icons provide a visual cue, while a range of audio options, including multiple alarm tones and spoken instructions offer additional clarity. For users who need silent or tactile alerts, the Vibe also comes with a vibrating pillow pad. Using its unique voice guided programming interface, it can be installed in minutes with no tools or additional equipment required.

Vibe

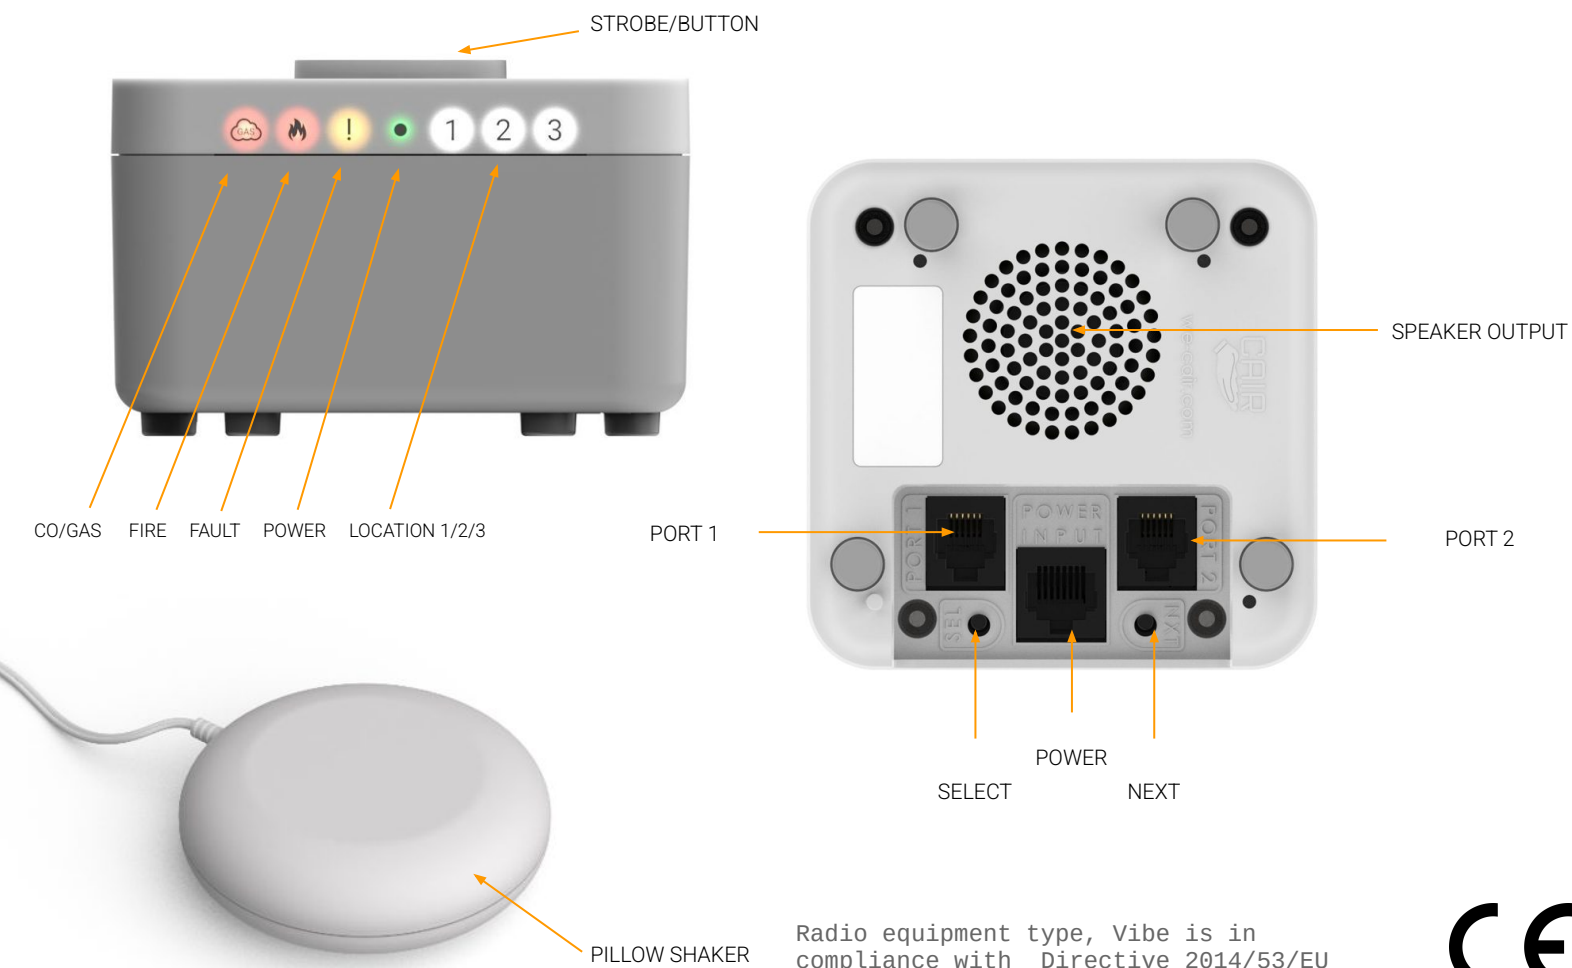

Sensory and Communication Aid
